## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Jung et al. (6246479). Jung et al. disclose a system and method of acquiring and processing images of a tooth (col. 4 lines 2-5). The steps including lighting a zone of the tooth in monochromatic light at a wavelength selected to excite emission of fluorescence (col. 66 lines 47-65), by the mineral portion of the tooth (col. 45 lines 14-17) using video to take images of lighted zone of the tooth (col. 37 lines 15-18, col. 45 lines 31-39) in two wavelength bands, one of which is in a high energy portion and the other of which is in a low energy portion of the emission spectrum, measuring the spectral intensity of the emitted fluorescence in these two wavelength bands at each point of the images, one in the ultraviolet and other visible (col. 15 lines 33-60), and taking the ratio at each point of the measurements in the two wavelength bands and comparing the ratio with predetermined values (col. 45 lines 31-40, col. 59 lines 55-61). The system includes spectral filter means comprising interchangeable color filters (col. 4 lines 33-37). The

transmission means comprises an optical fiber image guide (col. 4 lines 7-13). The apparatus also include shutter or time gate means associated with the video means for taking alternately images of the zone of the tooth as illuminated in visible light and fluorescence images of the zone in high and low energy wavelength bands of the emission spectrum (col. 50 lines 45-53).
